# NESTING PEDESTALS

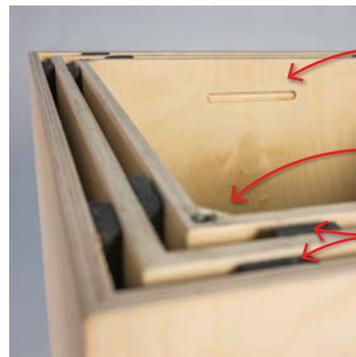

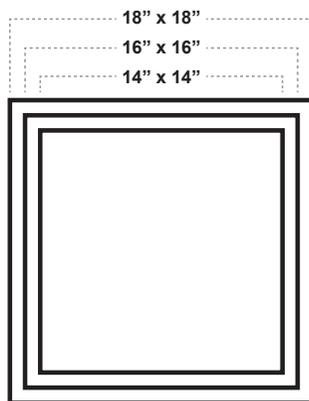

Top-quality museum pedestals designed to save valuable storage space when not in use.

Upland® pedestals are made from cabinet-grade baltic birch plywood. This makes them more durable than pedestals made of lower-quality materials like particleboard and MDF.

◀ Nesting Pedestals can be built in any size so long as **the width and depth dimensions are 2" smaller** than the pedestal they will nest inside.

You must tell us when placing the order that you want the pedestals to nest, because Nesting Pedestals are constructed differently than other Upland pedestals to maximize the amount of space available inside each box!

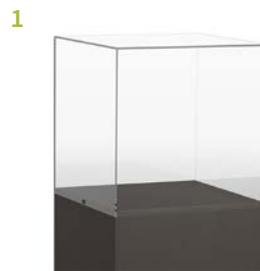

Nesting Pedestals have finger grips routed into the inside of each pedestal face.

Any or all of the pedestals can have leveler feet added.

Foam strips allow the pedestals to slide in and out of storage without damage.

**OPTIONAL ADD-ONS**

- 1 Vitrine**  
Include matching vitrines to further protect and secure your artifacts.
- 2 Leveler Feet**  
Scuff-proof leveler feet ensure that your pedestals are level even if the floor isn't.

**CHOOSE YOUR COLOR**

Let us know what paint color you want and we'll apply it along with a 3x Polycrylic® topcoat in our Signature Finishing Process.
